

- **User Acceptance Testing (UAT) Report: Dream Drive**

Project Name: Dream Drive – Local Garage Recommendation System

Tester Name(s): [Insert Names of friends/car enthusiasts who tested it]

Test Date: April 2026

Environment: Streamlit Web Interface (Localhost/Cloud)

1. Introduction

The purpose of this UAT is to confirm that the **Dream Drive** application meets the needs of car enthusiasts and garage owners. The goal was to ensure that users can successfully find specialized garages (e.g., Lancer Box or Evolution specialists) and that the recommendation logic is intuitive and accurate.

2. Participant Profile

To ensure valid results, the following testers were selected:

- **User A:** A classic car owner looking for restoration services in Pannipitiya.
 - **User B:** A garage owner specializing in Japanese domestic market (JDM) modifications.
 - **User C:** A university student interested in racing car subculture.
-

3. Test Cases & Results

This section documents the specific tasks users performed and whether the system met their expectations.

Test ID	Task / Scenario	Expected Result	Status (Pass/Fail)	User Comments
UAT-01	User searches for "Lancer Box" restoration.	System displays top 5 relevant garages from garage_list.pkl.	Pass	"Found the Rukmale specialist instantly."
UAT-02	User clicks the "Contact" button for a garage.	System provides direct contact information or link.	Pass	"Very fast, no unnecessary clicks."
UAT-03	Garage owner attempts to view the list of services.	The UI displays categories clearly (Tuning, Painting, etc.).	Pass	"Categories match local terminology."

Test ID	Task / Scenario	Expected Result	Status (Pass/Fail)	User Comments
UAT-04	User inputs an invalid car model.	System handles the error gracefully without crashing.	Pass	"Suggested 'Not found' instead of breaking."

4. User Feedback Summary

4.1 Positive Feedback

- **Efficiency:** Users liked the "one-click" connection, noting it was much faster than searching through TikTok or Facebook groups.
- **Niche Focus:** Testers appreciated that the system specifically targets the Sri Lankan enthusiast market (mentioning specific models like the BJ45).

4.2 Areas for Improvement (Bug Fixes/Enhancements)

- **UI/UX:** One tester suggested that the Streamlit interface could use more "automotive-themed" colors (Black/Red/Carbon Fiber style) to match the car culture.
- **Data Volume:** Users requested a larger database of garages outside the Western Province.

5. Final Acceptance Sign-off

Acceptance Criteria:

- [x] All "Must-Have" functional requirements are operational.
- [x] No critical system crashes occurred during testing.
- [x] The recommendation accuracy was verified by the researcher.

Conclusion: The users have confirmed that the system is **fit for purpose**. The "Dream Drive" application is ready for final submission/deployment, pending the minor UI adjustments mentioned above.
