DREAM DRIVE

Connecting Enthusiasts
with Services

IT21385582 | Dasuni K.S.

Information Systems Engineering

Digital Drive and Young Car Enthusiasts

25-26J-534

Introduction

Now a days everything rely on digitalization. When exploring the automotive industry, the whole world specially the up countries are using digitalization effectively. But social representations regarding automotive industry and classic car modification create unique marketing opportunities that remain highly untapped in Sri Lanka.

This is where “Digital Drive” comes into play through recommending local garages with their specialty and connect car enthusiasts and garage owners in effective way.

The Research Problem

Car users in Sri Lanka still using traditional methods to find reliable garages such as time-consuming physical searches or rely on word-of-mouth recommendations.

Main Objective

There is a need to develop an intelligent, effective system that recommend with one click, connecting local garages and car enthusiasts.

Sub Objectives

Instant garage matching

Find nearby garages within minutes based on your specific service needs.

Location-based search

Uses current location to connect with closest qualified service providers.

Specialized garages

Easily filter garages by car type and specific service requirements.

Rating system

Make informed choices through customer reviews and quality ratings.

The Business Model Canvas

Designed for:
Digital Drive and Young Car Enthusiasts

Designed by:
Dasuni K.S. – 25-26J-534

Key Partnerships

- Local garages and service centers
- Automotive parts suppliers
- Car clubs and enthusiasts communities
- Social media influencers in the automotive niche
- Payment gateway providers
- Location and mapping service providers.

Key Activities

- Platform development and maintenance.
- Geo-location integration for garage recommendations.
- Onboarding and verifying garage owners.
- Content moderation (videos, comments, reviews)
- Marketing and community engagement.

Key Resources

- Mobile and web application
- Geo-location and recommendation engine
- Garage dataset
- Content hosting infrastructure
- Marketing and community management team
- Technical development team

Value Propositions

- Simplifies finding specialized automotive services nearby.
- Connects car enthusiasts (age 18-30) with trusted local garages.
- Enables garages to showcase expertise through videos and profiles.
- Builds a social community for car enthusiasts to interact and learn.
- Inspire classic car restoration and modification culture among youth.

Customer Relationships

- Interactive platform with user profiles and engagement tools.
- Community-driven feedback and rating system.
- Personalized recommendations based on location and preferences.
- Social media integration for sharing and discussions.

Channels

- Website portal (primary platform)
- Mobile app
- Social media platforms (Instagram, TikTok, Facebook, YouTube)
- Automotive events and meetups.
- Partnerships with car clubs and garages.

Customer Segments

- Local garage owners and mechanics.
- Young car enthusiasts aged 18-30.
- Classic car collectors and restorers.
- Automotive content creators and influencers.

Cost Structure

- Platform development and maintenance.
- Marketing and user acquisition
- Server and hosting costs
- Customer support and moderation
- Partnership and licensing fees
- Content creation and promotional campaigns

Revenue Streams

- Subscription fees from garages for premium listings.
- Advertising and sponsored content
- Commission on service bookings
- Affiliate marketing with part suppliers
- Event sponsorships and partnerships.

Overall System Diagram

Research Novelty Component

Create a recommendation system to connect local garages with their specialty and car enthusiasts using machine learning for profiling and matching.

Research Focus & Gap Identification

Digital engagement gap

Limited online presence

Local garages lack digital visibility, making it difficult for enthusiasts to discover specialized automotive services.

Untapped market potential

Young car enthusiasts represent significant marketing opportunity that remains underserved in Sri Lankan automotive industry.

Disconnected communities

Car enthusiasts struggle to connect with qualified local service providers for specialized specialized vehicle needs.

Trust barriers

Absence of reliable review systems prevents quality assessment of garage services for potential customers.

Young car enthusiasts

Age 18-35

Primary target demographic with growing interest in automotive customization and digital solutions.

Digital Engagement

Connecting through social media platforms and interactive web application features.

Untapped Market

Significant opportunity in Sri Lankan automotive sector for specialized digital marketing and services.

Enthusiast Preferences

Focus on classic cars, sports modifications, and performance customization services.

Untapped marketing opportunities

1

Digital engagement gap

Young enthusiasts disconnected from local automotive services despite high interest in car culture.

2

Specialized services

Restoration and modification services lack visibility despite growing demand among 18-35 demographic.

3

Trust building

Ratings and reviews system creates transparency in transparency in previously word-of-mouth dominated industry.

4

Market expansion

Connecting enthusiasts with specialized garages creates new revenue streams for local businesses.

Research Problem

How can we create a recommendation system to connect local garages with their specialty and car enthusiasts using machine learning for profiling and matching?

Specific Objectives

Increase customer base – garage owners

Wider Reach

Connect with more potential customers through digital platform visibility.

Targeted Marketing

Attract specific customer segments based on service preferences and location.

Enhanced Visibility

Help garages showcase specialties to relevant audiences seeking specific automotive services.

Customer Retention

Build loyalty through ratings, reviews and consistent service quality tracking.

Create automotive marketplace – car users & garage owners

Connect Buyers and Sellers

Facilitate transactions between car enthusiasts and garage owners through integrated marketplace features.

Parts Exchange Platform

Enable trading of automotive parts, accessories, and specialized equipment within the Dream Drive community.

Allow customers to post projects while garages compete with quotes and portfolios. portfolios.

Service Bidding System

Feature completed classic and sports car projects to attract enthusiasts and potential potential clients.

Restoration Showcase

Methodology

Proposed System

Dream Drive Application

Web platform connecting car enthusiasts with local garages through one-click service matching.

Service Categories

Specialized garage listings for performance, painting, engine repairs, interior design, maintenance, wheel alignment, car care and accident repairs.

Quick Recommendations

Matches users with nearby garages within 1-2 minutes based on location and requirements.

Target Audience

Young car enthusiasts aged 18-35 seeking specialized automotive services.

System Diagram

Data Collection Techniques

01

Online Surveys and Questionnaires

Surveys will be distributed to young car enthusiasts through google forums and social media groups to collect data on preferences and behaviors.

02

Social Media Analytics

Analysis of engagement metrics across platforms to understand how young consumers interact with automotive content and identify trending topics and influencers.

03

Focus Group Discussions

Structured conversations with selected participants to obtain qualitative insights into motivations, perceptions, and decision-making processes regarding automotive interests.

Tools and Techniques

Hardware & Support

- High performance Laptop/ PC
- Internet Connection
- Code Editor (VS Code)

Software Tools

- Python
- Anaconda
- Jupyter Notebook
- SQLite
- VS Code

Data Collection Tools

- Google Forms
- Social Media Platforms
- Google Places APIs

System Requirements Analysis

User Interface Requirements

Interactive dashboard for young car enthusiasts featuring customizable views, views, mobile responsiveness, responsiveness, and social media integration to enhance digital engagement with automotive content.

System Requirements

High performance Laptop/ PC,
Internet Connection,
Code Editor (VS Code),
and relevant software tools

Functional Requirements

User authentication, Project creation and showcase that the local local workshops can upload multi-multi-stage photo/video galleries of projects, User Interaction which is enthusiasts can 'Like' and 'Comment' on project showcases

Non- Functional Requirements

Performance: The platform must must load core content within 2 seconds, Security, Usability, Scalability

Current Progress – 80%

- Identified and collected the dataset.
- Analyzed the data according to the project requirements.
- Develop the advanced coding structure of the system.
- Developed the **machine learning python code for garage recommendation by fetching the customer geo-location**.
- Developed the **advanced coding structure for garage owners to create the profile of garage (register the garage), to upload images/ videos of their work showcase, to reply customers' questions and comments**.
- Developed the **advanced coding structure for customers to search registered garages, to view garage profiles, to ask questions and allow commenting, to view the location of the garage**.
- Developed the **advanced code to share, see distance, social media profile mentions and verification of recommended garages**.

Future Work to be Completed

- Develop the advanced coding structure of the entire system.
- Develop the interface specially for young car enthusiasts regarding classic car modification and restoration by connecting social media platforms.
- Develop the UI/UX acceptable for an enterprise level product.

Thank You !
